<b>Office Action Summary</b>	Application No. 10/511,002	Applicant(s) MIKKELSEN ET AL.	
	Examiner Andre J. Allen	Art Unit 2855	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --  
**Period for Reply**

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Objections*

1. Claims 3-14 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim *"should refer to other claims in the alternative only--, and/or, --cannot depend from any other multiple dependent claim"*. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

### *Claim Rejections - 35 USC § 102*

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claim 1 is rejected under 35 U.S.C. 102(b) as being anticipated by Sakaino et al (JP62027637A).

Regarding claim 1 Sakaino et al teaches at least one measurement element 1 arranged on the diaphragm (abstract), for detecting a diaphragm deflection (abstract), characterized by at least one holding element 3 arranged on a surface of the diaphragm abstract for accommodating a sealing element (abstract), with a through-hole (4a) which faces the surface of the diaphragm (abstract) and which has a cross section corresponding to the outer contour of a sealing element to be accommodated (fig. 1).

***Allowable Subject Matter***

1. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: The cited prior art does not suggest nor disclose a holding element in each case is arranged on each of the surfaces of the diaphragm which are opposite to one another, each with a through-holes, which faces the surface of the diaphragm and which has a cross section corresponding to the outer contour of a sealing element to be accommodated.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. US 4040297 teaches a pressure sensor having a holding structure for a diaphragm.
